Continuation of 11. does NOT place the application in condition for allowance because: The applicant's arguments have been considered but are not persuasive.

In response to the applicant's argument that Molas merely describes a pantiliner having different areas separated by embossing, it is noted that the article of Molas comprises separate and physicically different areas, as described in paragraph [0036]. The central portion, which is larger and thicker, comprises the absorbent core of the article. The side portions, which are smaller and thinner, and are designed to be folded under a garment during use, comprise the side margins.

In response to the applicant's argument that Molas fails to disclose the presense of a cover, core, and barrier, it is noted that Molas describes in paragraph [0007] an article comprising a cover, a barrier, and a core located therebetween.

In response to the applicant's argument that Molas fails to disclose the cover and barrier extending beyond the core, it is noted that the article show in figures 1 and 2 shows a core 3 with side areas 4 and 5 extending beyond the core 3. Since the cover and barrier are comprised in the side areas 4 and 5, they therefore extend beyond the core 3.
